

## 4. Exterior Materials and Finishes

### Building Materials

Building materials have one of the strongest visual effects of all elements of building design. Therefore, they should be selected based on compatibility with the building style and neighborhood character. The scale of the building materials used should respond to the scale of the proposed building. Figure 7 shows the permitted building materials. Synthetic materials similar in appearance and durability are also allowed. Exposed concrete block and corrugated metal are prohibited.

**Figure 7: Permitted Materials for Exterior Walls**

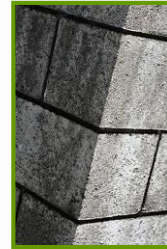

Natural Brick

Wood Siding

Stucco

Finished Concrete

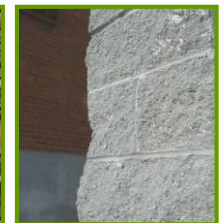

Brick

Cementitious Siding

Stone

Split-Face Block

**Figure 8: Permitted Materials for Roofs**

Clay Tile

Slate or clay

Metal Seam

### Roof Materials

Figure 8 shows the permitted roof materials. Other materials allowed include concrete tiles, asphalt fiberglass shingles, and metal standing seam. Cedar shake wood is allowed for residential uses only.

Not Allowed: Inappropriate Materials

Allowed: Appropriate Materials
