

Capital Improvement Program

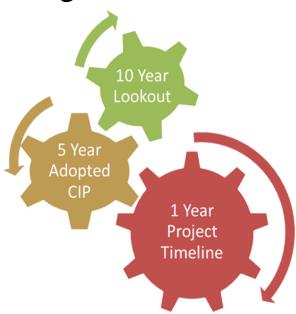

This page intentionally left blank

Capítal Improvement Program

PROCEDURE

Each year the Capital Improvement Program (CIP) is prepared from project requests submitted by the various departments. The requests require a project description, justification, cost estimates, statement of impact on the City's annual operating budget and an implementation schedule. After compilation of the requests, projects are reviewed by staff members from the City's Infrastructure Team. This team consists of project managers, planners, division managers, and the Finance Director. This team reports directly to the City Manager.

10 YEAR LOOKOUT

The infrastructure team prepares a "Ten–Year Capital Project Lookout" annually. This "lookout" is presented to City Council and allows staff to receive direction on future capital project needs.

5 YEAR ADOPTED CAPITAL IMPROVEMENT PROGRAM (CIP)

As an integral component of the annual budget process, each year a five-year CIP is adopted by City Council. Chapter 163 of the Florida Statutes requires the City to adopt a five-year schedule of capital improvements that includes publicly funded federal, state, or local projects, and may include privately funded projects for which the City has no fiscal responsibility. Projects necessary to ensure that any adopted level-of-service standards are achieved and maintained for the 5-year period must be identified as either funded, or unfunded and given a level of priority for funding. The five year schedule and the level of service standards are established in the Capital Improvements Element (CIE) of the City's Comprehensive Plan. Project review, along with available funding and CIE requirements, forms the basis of the program compiled by the Infrastructure Team. The recommended program is then reviewed by the Mayor and City Council in conjunction with their review of the annual operating budget. The City is required to review the CIE of the Comprehensive Plan on an annual basis and modify it as necessary to maintain a five-year schedule of capital improvements. Modifications to update the 5-year capital improvement schedule may be accomplished by Resolution and are not considered amendments to the Growth Management Plan.

1 YEAR PROJECT TIMELINE

At the start of the fiscal year, a one-year project timeline is presented to City Council. The timeline is updated quarterly to show changes throughout the year. The first year of the five-year Capital Improvement Program is the Capital Budget. The Capital Budget is adopted by the City Council with the adoption of the annual operating budget. There is no commitment to expenditures or appropriations beyond the first year of the Capital Improvement Program.

DEFINITION OF CAPITAL IMPROVEMENTS

Capital Improvements are defined as physical assets, constructed or purchased, that have a minimum cost of \$5,000 and a minimum useful life of three years. Only projects that meet this definition of a capital improvement are included in the program, such as:

- a. New and expanded physical facilities for the community.
- b. Large scale rehabilitation or replacement of existing facilities.
- c. Major pieces of equipment which have a relatively long period of usefulness.
- d. Equipment for any public facility or improvement when first erected or acquired.
- e. The cost of engineering or architectural studies and services relative to the improvement.
- f. The acquisition of land for a community facility such as a park, highway, sewer line, etc.

Normal replacement equipment and normal recurring renovations which are funded in departmental operating budgets and cost less than \$5,000 are generally excluded from the Capital Improvement Program. Exceptions will occur for projects that contain multiple phases, or the current year CIP project is the planning phase of a construction project.

FUNDING SOURCES FOR CAPITAL PROJECTS

General Revenue – CIP

General revenue consists of a variety of sources, including Property (Ad Valorem) taxes, Federal and State funding through grants, and other fees. Property tax revenue is based on a millage rate (one mill is equivalent to \$1 per \$1,000 of assessed value), which is applied to the total assessed property value. The City of Palm Coast's 2016 millage rate for capital projects totals .1622 and relates to stormwater improvements and a restroom at the sports fields.

Federal Aid – Community Development Block Grant Funds

Under the Housing and Community Development Act of 1974, recipients of funds may undertake a wide range of activities directed toward neighborhood revitalization, economic development and provision of improved community facilities and services. Specific CIP activities that can be carried out include acquisition of real property and demolition, acquisition, construction, reconstruction, rehabilitation, relocation or installation of public facilities.

Local Option Gas Tax Funds

Per State Statute, the revenue received can only be used for transportation related expenditures. Proceeds must be used toward the cost of establishing, operating and maintaining a transportation system and related facilities and the cost of acquisition, construction, reconstruction and maintenance of roads.

Small County Surtax

This tax replaced the Local Government Infrastructure Surtax which expired on December 31, 2012. This revenue is in the form of an additional county-wide sales tax of .5%.

Water and Wastewater Charges

Monthly service charges are assessed for the use of services and facilities of the City's water and wastewater system. Service charges are used to pay for operating expenses, maintenance, construction and debt service.

Stormwater Utility Fee

The City enacted a stormwater utility fee in 2005. Funds from this revenue source can only be used for the operation, maintenance, replacement, and construction of the City's stormwater management system. Each year a portion of the funding will be allocated for capital improvements, while the remainder will be used for operating and maintenance expenses.

Tax Increment Financing

A Community Redevelopment Agency may be established per Chapter 163 of the Florida Statutes to address blight conditions in a specified area. A base year is established and a base taxable valuation is determined for the property within the designated area. The tax increment above the base year valuation is then utilized in an effort to eliminate the blight conditions. Capital improvement projects, such as redevelopment projects or infrastructure improvements, maybe undertaken utilizing these funds. Tax Increment Financing is used to fund projects in the SR100 CRA Fund.

Impact Fees

The City adopted a Water, Wastewater, Transportation, Fire and Recreation Impact Fee Ordinance that allows the City to charge a fee for new construction projects to ensure that development pays its fair share of the cost of new and/or expanded facilities necessary to accommodate that growth. Impact fee revenue can only be used for growth and development related to capacity improvements.

Other Funds

Other Funds may include public and private contributions, developer commitments, transportation authority and agency commitments and other government participation.

FLEET REPLACEMENT PROGRAM

The initial purchase of new fleet is charged to the department and is approved by the City Manager during that department's budget approval process. The fiscal year following the year the initial purchase was made, an internal allocation begins being charged to the department for the estimated cost to replace the equipment in the future. This allocation includes an inflationary estimate. The length of time the allocation is collected is based on the expected life of the equipment. For example, if a vehicle is expected to last 5 years the replacement cost will be split into 5 annual allocation amounts. The allocation is charged to the department on a monthly basis.

The future replacement purchase is made by the fleet department and is charged to the fleet fund, an internal services fund, where the annual allocations are credited as revenue. All City vehicles and equipment are evaluated on an annual basis in order to prioritize the replacements and repairs needed in the upcoming year. During the evaluation the Fleet Supervisor takes into consideration the age, condition, maintenance cost and expected life of each piece of equipment and prepares a recommendation for management. Each year, the total cost of the annual replacement program is approved by City Council during the budget process and is approved by City Council prior to the actual purchase being made.

Impact of Capital Projects on the Operating Budget

The Capital Improvement Program is a crucial component of the City's annual budgeting process. Costs associated with new and expanded infrastructure are normally included in the operating budget at the time at which the item becomes operational. It is possible, in certain cases that impacts may be phased in during the construction or acquisition period. An example of this would be the construction of a Fire Station. Given the time-frame for recruiting, hiring and training, some personnel costs may be added to the budget prior to the official opening of the Station. Operating costs, such as utilities, would then be budgeted for the time the Station actually opens.

Some capital projects may require debt financing, resulting in scheduled annual debt service payments. Any applicable debt service on debt issued for capital projects is also included in the operating budget. Although the issuance of debt may be the most feasible way to fund capital improvements, debt service will reduce the amount of funds available for other uses. The ratio of debt service to the size of the budget as a whole, and particularly to operating costs, must be maintained at appropriate levels.

TRANSPORTATION

New transportation infrastructure normally does not have specific additional operating costs, other than material and supplies for maintenance. However, roads, sidewalks, pedestrian crossing, pavement marking, signals and signs must be kept up to City and other required standards. As more miles are brought on line, additional staff and equipment may be needed at some point in the future in order to maintain desired service levels.

RECREATION

New recreation infrastructure can have a significant impact on operating costs. These could include additional personnel, operating costs related to daily operations, materials and supplies.

STORMWATER

New stormwater infrastructure normally does not have specific additional operating costs, other than material and supplies for maintenance. In addition, infrastructure must be kept clear of debris. Maintenance of new and improved infrastructure included in the Capital Budget is included in the operating budget of the Stormwater operations and is funded from Stormwater Utility Fees accounted for in an Enterprise Fund. Funds from this revenue source can only be used for the operation, maintenance and construction of the City's stormwater management system. Each year, a portion of the funding is allocated for capital improvements, while the remainder is used for operating and maintenance expenses. Additional staff and equipment may be needed at some point in the future in order to keep the infrastructure maintained at an optimum level. No additional staff is being added this fiscal year.

WATER & WASTEWATER

A significant portion of the City's water and wastewater infrastructure is over 20 years old and deteriorating and declining in reliability and efficiency. Replacing equipment with current technology will assuredly generate energy savings. At this time the exact amount of savings is unknown.

Físcal Year 2016 Major Capítal Projects

Seminole Woods Path \$1,250,000 Capital Projects Fund

These amounts are to continue construction of a multi-purpose path along Seminole Woods Parkway. This includes design, permitting, environmental clearance and construction of this multi-phase project. The project will be completed in annual phases. A DOT grant of \$546,000 was secured for a portion of this years construction.

Future Impact: General Fund, Streets & Drainage Division

Minimum maintenance will be required for the path which will include patches and maintenance of the landscape.

Holland Park Renovation \$3,760,000 Capital Projects Fund

This project will include the replacement of the utility infrastructure and will correct drainage issues. It will also enhance traffic circulation, add parking, correct ADA issues, and repair/renovate existing structures. Also included in the project is a new enlarged dog park, a bocce ball court covering, two new horseshoe pits, a new and enlarged playground, a new splash park, roadway and parking lot lighting, sports activity lighting, a perimeter walking trail, new fitness stations and new land-scaping as well as irrigation.

Future Impact: General Fund, Parks Maintenance Division

This is an existing park with existing operating costs. Upon completion, maintenance costs may increase slightly due to the increase in size of the park as a result of the improvements.

Palm Coast Parkway Six Lane Construction \$1,578,216 Streets Improvement Fund

The widening of Palm Coast Parkway from a 4-lane divided, rural typical section to a 6-lane divided, urban typical section will consist of adding one travel lane along the outside lane in each direction, a distance of approximately 1.23 miles. This 6 -laning will extend from Cypress Point Pkwy/Boulder Rock Dr east to Florida Park Dr. The City is expecting to receive a significant amount of FDOT grants to complete this project. The project will be completed in fiscal year 2016.

Future Impact: General Fund, Streets & Drainage Division

This project is not anticipated to significantly impact future operating costs.

North Old Kings Road Widening \$1,050,000 Streets Improvement Fund

This project includes a section of Old Kings Road from Palm Coast Parkway to Forest Grove Drive. Old Kings Road North will be connected directly to the Old Kings Road Extension. The current road is a two lane rural road that will need to be upgraded to handle additional traffic from the planned Matanzas Woods I-95 interchange which is expected to be completed in 2016. This amount is for design and will receive grant funding.

Future Impact: General Fund, Streets & Drainage Division

This project is not anticipated to significantly impact future operating costs.

Swale Rehabilitation & Pipe Program \$2,192,411 Stormwater Management Fund

This is the cost of materials and labor needed to rehabilitate the swales and drainage pipes in the City. The goal is to regrade at least 25 miles of swales each year.

Future Impact: Stormwater Management Fund

This project is not anticipated to significantly impact future operating costs.

Palm Harbor Extension \$3,000,000 Streets Improvement Fund

This project includes the construction phase of the extension of Palm Harbor Parkway from South of Forest Grove Drive to Old Kings Road. This project is an integral part of the Matanzas Wood I-95 interchange project expected to be completed by the FDOT by 2016.

Future Impact: General Fund, Streets & Drainage Division

The impact of future operating budgets will include the cost of maintenance of the road, median and shoulders.

Street Paving and Resurfacing \$1,500,000 Streets Improvement Fund

The City of Palm Coast has over 550 miles of streets which it maintains. This amount is for the annual appropriation for the resurfacing program.

Future Impact: General Fund, Streets & Drainage Division

This project is not anticipated to significantly impact future operating costs.

Wellfield and Wells \$3,550,000 Utility Capital Projects

This project includes wellfield expansition for Water Treatment Plant 2 as well as some replacement well construction costs.

Future Impact: Utility Fund

Future operating costs include electrical, generator maintenance and load testing, motor, pump and misc. equipment O&M, landscaping, hydrological data collection and record keeping. This is estimated at \$6-8,000 per year per site.

Force Mains \$1,029,498 Utility Capital Projects

This project includes phase 3 of the Old Kings Road force main as well as force main extensions.

Future Impact: Utility Fund

Annual operating cost for this is considered to be very minimal.

Reclaimed Water Mains \$1,000,000 Utility Capital Projects Fund

This project includes a reclaimed water main for Seminole Woods Blvd.

Future Impact: Utility Fund

The future operating costs are expected to be mostly labor costs for checking signage, reading meters, repairs to ARV's (air relief valves) and main breaks. Annual estimated cost \$3,000 per year.

Wastewater Treatment Plant 2 \$7,530,000 Utility Capital Projects

This project includes the engineering, design and a portion of the construction costs to build a second wastewater treatment plant. This plant is being constructed to increase the city's wastewater capacity in order to keep up with demands as a result of growth. The entirety of this proejct is expected to be completed in fiscal year 2018.

Future Impact: Utility Fund

The second wastewater treatment plant will be an advanced wastewater treatment plant however future operating costs are anticipated to be in line with the cost of the existing wastewater treatment plant which is approximately \$2,500,000 per year.

Lift Stations and Pump Stations \$1,440,000 Utility Capital Projects

This project includes the Old Kings Road master pump station budgeted at \$1,000,000 and also includes other pump station upgrades as well as odor controls systems.

Future Impact: Utility Fund

Annual operating cost for this pump station would include power, annual generator inspection and load testing and fuel, future odor control, landscape maintenance, and labor for weekly inspections by staff. Estimated cost of \$5,000 to \$7,000 per year for first five years.

2016 Capital Projects Timeline

The one year capital projects timeline does not include all capital projects. The design portion of each project is represented separate from the construction portion. During the course of the year the "on-going timeline" will be adjusted to reflect actual results.
